Profile

I am a dedicated and driven software engineer, who delivers solutions to complex business problems. As a person, I have an open-minded and systematic approach to the challenges I run into, and strive to deliver high-quality work. I thrive in diverse, team-based environments, greatly value open communication, and am comfortable with leading as well as being led. I am looking to combine software engineering and data engineering to deliver impact.

Skills

Languages: Hungarian - native, English- fluent, Danish - limited

Programming languages: Python - feels like home, Go - strong, SQL - strong

Frameworks & Technologies: gRPC, PostgreSQL, ClickHouse, MongoDB, Redis, Docker, Kubernetes, Prometheus, Grafana, Sentry, Dagster, Polars

Experiences

Backend Engineer (2024 April - today) @Matter: Developed high-performance backend infrastructure including Python and Golang APIs (both RESTful and gRPC), and Dagster ETL pipelines leveraging Polars for data processing. Built and maintained internal libraries as well as supported legacy APIs. Instrumented all projects with comprehensive observability including Prometheus metrics, Sentry integration for error aggregation and distributed tracing, and Grafana dashboards to monitor deployments. Orchestrated deployments on Kubernetes for scalable, production-ready data systems.

Software Engineer (2022 March - 2024 March) @Sensae: Architected and maintained the backend of a data analytics platform deployed as Docker containers on Cloud Run, developed ETL and CI/CD (Github Actions) pipelines.

Data Scientist (2021 November - 2022 February) @Sensae: Developed high-accuracy activity classification algorithms, implemented both traditional and ML-based signal processing solutions, and created business intelligence dashboards to drive data-informed decisions.

Data Scientist intern (2021 August - 2021 October) @Sensae: Developed a 90+% accurate stress classifier algorithm, translated and optimised analysis scripts from R to Python, contributed to research design, and performed statistical analysis on research data.

Co-Founder (2017) @Rhinitivity: [Fighting e-waste and connecting the world](#)

Education

Master's degree in Service Systems Design (2019 - 2021) @Aalborg University Design thinking, programming, systems design, distributed systems

Elective semester (2020 - 2021) @CBS Statistics, machine & deep learning, big data analytics, game theory

Bachelor's degree in Product Development & Integrative Technology (2016 - 2017) @KEA Project management, product development, sustainable technologies

AP degree in Energy Technology (2013 - 2015) @UCN Energy of the building complex, energy supply & conversion, energy production facilities & renewable energy sources

Courses

Data Analyses with Python (2019) @EDX-IBM online course [Certificate](#)

Getting Started with Go (2023) @ Coursera online course [Certificate](#)

Functions, Methods, and Interfaces in Go (2023) @ Coursera online course [Certificate](#)

Volunteering

Tunapanda NET Project (2017) @Nairobi, Kenya [Helped building a mesh network that aims to promote online learning](#)

United Nations Youth Association - Global Health working group (2019) @One Bowl Created a one-off collaboration between UNYA & One Bowl to organise an event promoting “food-waste consciousness”
